Denitrification treatment tank 4A Nitrification tanks 5,6</p>
<p><u>NOVELTY</u> The apparatus consists of a MAP reaction vessel (6) into which process liquid from a denitrification treatment tank (4A) is introduced. A nitrification tank (5) is also provided, into which liquid processed in MAP reaction vessel is introduced. The tanks (6,5) are biological slime processing type.</p> <p><u>USE</u> For processing waste water containing phosphorous and nitrogen.</p> <p><u>ADVANTAGE</u> Waste water is treated efficiently and MAP of high purity is recovered efficiently. Outflow of sludge from each tank and inflow of</p>	<p>JP 2000210696-A+</p>
